Plant Height: 6 inches

Flower Height: 12 inches

Spread: 6 inches

Spacing: 3 inches

Sunlight: ○ ◐

Hardiness Zone: (annual)

Other Names: syn. Habranthus robustus, Fairy Lily, Zephyr Lily

Description:

This variety produces small, amaryllis-like pink blooms that fade to white with pink tips; only blooms once it is well established, and in ideal moisture conditions

Ornamental Features

Rain Lily features bold pink trumpet-shaped flowers with white overtones and yellow anthers at the ends of the stems from late summer to mid fall. Its narrow leaves remain green in color throughout the season.

Landscape Attributes

Rain Lily is an herbaceous annual with an upright spreading habit of growth. Its medium texture blends into the garden, but can always be balanced by a couple of finer or coarser plants for an effective composition.

This plant will require occasional maintenance and upkeep, and is best cleaned up in early spring before it resumes active growth for the season. It has no significant negative characteristics.

Rain Lily is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use
- Container Planting

Planting & Growing

Rain Lily will grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 6 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 3 inches apart. Although it's not a true annual, this plant can be expected to behave as an annual in our climate if left outdoors over the winter, usually needing replacement the following year. As such, gardeners should take into consideration that it will perform differently than it would in its native habitat.

This plant does best in full sun to partial shade. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is somewhat tolerant of urban pollution. This species is not originally from North America, and parts of it are known to be toxic to humans and animals, so care should be exercised in planting it around children and pets. It can be propagated by division.

Rain Lily is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers against which the larger thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
